

1 ABSTRACT

2

3 Arrays of protein-capture agents useful for the simultaneous detection of a plurality
4 of proteins which are the expression products, or fragments thereof, of a cell or population of
5 cells in an organism are provided. A variety of antibody arrays, in particular, are described.
6 Methods of both making and using the arrays of protein-capture agents are also disclosed.
7 The invention arrays are particularly useful for various proteomics applications including
8 assessing patterns of protein expression and modification in cells.
